Spruce/Daniel Directo-Meston We purchased Black and Decker 40V MAX Lithium 24 inch Hedge Trimmer so our reviewer could test it on different types of plants. Keep reading for our full product review. Whether used at quick finishes or professional gardening jobs, hedge trimmers are an important tool for those who want to keep landscaping efficient. Gas trimmers tend to have more durability and durability when it comes to cutting thicker branches, but electric options like black and Decker 40V MAX 24 inches hedge trimmer are better for the environment. They are also more affordable as they do not incur additional fuel costs. In addition, with a battery model of this kind, there is no need to move on a pesky electrical cord or stay within a limited length. I checked this trimmer for months to see how it was defeated when used on different types of plants, from rosemary bushes to the ficus of live African iris trees. I was interested to see whether the blades delivered clean cuts, as well as how long the battery lasted for long and stop-and-go use. Keep reading to see if this is a product that we recommend adding to your tool shed.

Spruce/Daniel Directo-Meston This black and Decker hedge trimmer features 24-inch double-action blades that claim to produce less vibration when trimmed compared to single-action blade models. Compared to the DeWalt 40V MAX 22 Hedge Trimmer, which I also tested, this trimmer was louder and less smooth, but it didn't affect his ability to cut branches effectively. As a contented user of Black and Decker's 20V MAX-Lithium 22 inch POWERCUT™ Hedge Trimmer (which has an anti-jam button), I found that the 40-volt trimmer was noticeably more powerful and delivered a much cleaner finish. The 20-volt trimmer is usually chopped away by long-leaf shrubs, while this model has done a better job of cutting straight through the greens, including the long, thin leaves of my African iris plants. The trimmer lasts about an hour before requiring a refill, but I didn't find it uncomfortable, since my shrubs and hedges (as well as most of my gardening tasks) are on the low maintenance side. I noticed that the blades had a tendency to stall and get into the branches as the battery started to run low, but the slowdown should be expected as the energy decreases. The blades also take about three seconds to completely stop (about one second longer than the similar DeWalt trimmer I tested), so it's worth noting if you're concerned about gardening safety. Another difference between the 20-volt model and the 40-volt model is the lock mechanism. The first trimmer has a slightly more ergonomic pressed lock, while the latter has a sliding lock. We didn't find it. Difficulties in the sliding mechanism, and we do not foresee that this design detail is a serious problem. Spruce/Daniel-Directo Meston Comfort top of mind when I look at gardening tools, tools, if I expect to work for at least 30 minutes and use the product continuously for a few minutes. I expect to experience some hand and wrist fatigue at some point, but the trimmer's easy-to-capture wrap handle has done the job pretty comfortably when pruning shrubs from different perspectives. The noticeably lighter weight of the Black and Decker trimmer combined with 24-inch blades made it safe and easy to trim to 7 feet. At 7 pounds, I found this trimmer much lighter and thus easier to use over a long period of time compared to the 11.9-pound DeWalt 40-volt trimmer. As a small person, a heavy tool is a safety issue for me, especially if I need to raise a trimmer to reach higher branches. The noticeably lighter weight of the black-decker trimmer combined with the 24-inch blades made it safe and easy to trim up to 7 feet while standing on the ground as well as from the stairs. The spruce/Daniel Directo-Meston blades are made of rust resistant stainless steel, which supposedly stays sharper for longer. During my many gardening sessions, the blades proved sturdy and capable of cutting up to half an inch of branches easily. True to the brand's claim, the trimmer can cut branches to 3/4 inches in diameter, but performance has been inconsistent, and some denser, more woody branches tend to get stuck. We also left the trimmers outside for a week during which it had just happened with rain to check whether the blades were really resistant to rust. After minimal exposure to the elements, we noticed some rust light that did not surprise us as the blades were in the elements during the wet weather. The trimmer can cut branches to 3/4 of an inch in diameter, but performance has been inconsistent, and some denser, more wooden branches tend to get stuck. Spruce/Daniel Directo-Meston According to Black and Decker, the 40-volt lithium-ion battery is charged in an hour-claim I happily found accurate. The battery has an LED light charge light, with one light pointing to a low battery and three green lights pointing to a fully charged battery. I charged the battery when the indicator was at level one (when there was still some juice left) and found that the device was fully charged in about 30 minutes or so. According to Black and Decker, the 40-volt lithium-ion battery is charged in an hour - a claim that I was happy to find accurate. Installing the battery is simple - you just slide the device into the back of the trimmer, but you have to make sure it clicks firmly into place. Otherwise, the vibrating blade will cause the battery to dislodge and the trimmer to disable. El/Daniel Directo Meston is expected to have any engine-powered trimming device with moving blades, Black and Decker's 40-volt wireless trimmer produces noise while using. Like most people, gardening during the day, the noisy tool is not much of a worry for me as I didn't expect the work to be quiet. However, the clacking sound can be reduced with some fat fat WD-40, for example), and it will go a long way under the blades moving smoothly as well as prolonging their lives. This hedge trimmer ranges from \$115 to \$150, which is a good value given that it comes with a rechargeable lithium-ion battery that can be used with black and Decker other garden tools (as long as they work on the same voltage). Given that the DeWalt product I tested works about twice as expensive and noticeably heavier, I find this trimmer better to buy as far as convenience and design. As mentioned, I also tested DeWalt's 40-volt lithium-ion hedge trimmer, which clocks in at 11.9 pounds, but is noticeably quieter and more powerful. Even so, I prefer the black and Decker option as the bulky weight of DeWalt (which can be a problem for someone like me who is just over 5 feet tall and on the small side) outweighs its features. The Final Verdict Is an effective trimmer at a great price! If hand and hand fatigue, battery life, and ease of use are your main challenges, Black and Decker 40V MAX Lithium 24 inch Hedge Trimmer is your best choice. Although the engine is less powerful than the comparable 40-volt trimmer from DeWalt, we found that its ergonomic, lightweight design easily outweighs the benefits of a higher-end alternative. Versatile and reliable, the Black and Decker HH2455 offers great cutting power and a lightweight design that puts it among the best hedge trimmers out there. Like a wired electric trimmer, it produces no emissions to pollute the environment. However, wired models can often hold you back when it comes to pruning large gardens, as you are limited by the length of the extension cord. With a 24-inch double-action blade and a maximum cutting capacity of 0.75 inches, the Black and Decker HH2455 is suitable for small hedging trim tasks. The blade has a minimal vibration, even when cutting thicker, woody branches and dense undergrowth, so it is convenient to use. This electric hedging trimmer is relatively flexible, giving you enough accurate control to comfortably trim the delicate formal shrub. The 10.5-inch blades are made of solid steel that resists rust, so they remain sharp even when used for long periods of time. With 2,800 cutting beats per minute and a 120-volt engine, the trimmer is powerful enough for most hedges. However, if you have a big task at hand, gas models such as the Husqvarna 122HD60 will get the job done much faster. Unlike wireless hedging trimmers such as the Kobalt KHT 240-07, you have to plug this model in, and the cord is a little short at 150 feet. This limits the versatility of this hedging trimmer, as the average American lawn is about one-fifth of an acre. Thus, this hedge trimmer is best suited for small and medium-sized The cord retention function helps to keep the cord from disconnecting from the socket if you try to take the machine out of its reach. The Black and Decker HH2455 trimmer does not produce emissions and has a large cutting power. (image credit: Amazon) To reduce hand hand Muscle fatigue, this hedge trimmer has a lock switch that allows you to work continuously without hitting the button all the time. The lock function disables this feature when you finish or pause to reduce the risk of accidentally starting the machine. Since it uses a stationary engine, the machine has a good balance and even weight distribution for comfort and ease of use. The handle rotates up to 180 degrees, giving you precise control when cutting vertically or horizontally and allowing you to reach long, even punches in any position. For safety, handle locks depending on the position you choose. Weighing in at 6.5 pounds, this black and Decker hedge trimmer is light enough to work with for long periods comfortably. It doesn't come with a soft shoulder strap though, so you can't rest the trimmer when changing position or give your hands a break without putting it on the ground. Black and Decker HH2455 is a good trimmer for small and medium spaces with different types of shrubs. Since it is an electric model, you are limited by the length of the cord when pruning the foliage in your yard. However, it is lightweight, makes no emissions and is easy to use.
